

XFX Executive Function Extension / Extender

2022-08-27 Integrated Planner

One authoritative source to plan from

- should be separated into work & home? or by <n> realms?
- but still can be consolidated into one view for so that disconnection is efficient & true
 - scheduling
 - prioritization

Multiple integrations to other systems:

- two-way - other systems can update as well as view
- one way - other systems can only view

Systems I like

- To-Do because of the My Day & intuitive task management
- Outlook because calendars & communication (email) & contacts
- Excel because of dense grid & ~~flex~~ flexible extension
- OneNote because project support
- Planner because status sharing / or teams
- One Drive because project support
- Az DevOps because ~~to~~ boards, drag/drop priority
- ~~Proj~~ Project because scheduling, progress tracking
- Lists ~~also~~ because interface (not currently integratable?)
- Asana? Trello? Monday? others?

ALSO
Toggl
Time2u27

But I'm pretty sure I will need or want a custom UI

- written in?

WPF? MAUI? Blazor? WinForms?

• NET ~~is~~ client core library for sure, the rest is just presentation facade

Where is the one ~~author~~ authoritative source kept?
